

**SYSTEM, METHOD, AND COMPUTER PROGRAM PRODUCT FOR AN
INFORMATION HUB**

ABSTRACT

A system, method and computer program product are provided for network-based information management. A first habitat is initiated. The first habitat has markers that are utilized for identifying information selected by a user. The information associated with the markers is retrieved and displayed on an information screen of the first habitat utilizing a network. Multiple users are allowed to view the information screen of the first habitat. A second habitat is also allowed to access the first habitat for retrieving information from the first habitat.
